08-MAY-2001 (first entry)

Human cytokine receptor 2cytor14.

Cytokine receptor; 2cytor14; human; inflammation; rheumatoid arthritis; antiinflammatory; gene therapy; vaccine.

Burkhead SK, Pownder SL

Claim 2; Page 2; 112pp; English.

New polypeptide encoding a human cytokine receptor Zcytor14, for treating inflammation e.g. rheumatoid arthritis

colon;

Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents the human

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of cd expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of cd expression in the test sample indicates the presence of a tumour in the cd expression in the test sample indicates the presence of a tumour in the mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate tumour differentiation of chondrocyte cells. The PRO cs. Susceptibility to tumour development, particularly adrenal, lung, colon, protate, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids subjects. The oligonucleotide probes specific for the PRO nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for genetic analysis of individuals with genetic disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease, an autoimmune or immune-mediated skin disease, contact dermatitis, an allergic disease e.g. food hypersensitivity, asthma, a transplantation associated disease, or a chronic inflammatory demyelinating polyneuropathy. Treating a degenerative cartilaginous disorder comprises administering a PRO1022 polypeptide agonist, or antagonist to the mammal. Numerous examples of the diseases and disorders are given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  containing ant/agonists to the PRO polypeptides or individual components are useful for treating a mammal with an immune related disease, e.g. systemic upus erythematosus, rheumatoid arthritis, osteoarthritis, but only the property of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence is PRO20040 which is the human Interleukin 17 IL-17RH2, encoded by DNA 164625-2890. The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB61884 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g., anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents a chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention provides a new human cytokine receptor desinated Zcytor14. Zcytor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be useful to screen biological samples in vitro for the presence of Zcytor14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antiinflammatory;

                                 The invention provides a new human cytokine receptor desinated Zcytor14. Zcytor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14.
                                                                                                                                                                                                                                                                                                                                                                                                                                          Chimeric Zcytor14 protein #3

Captor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Ccytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents a chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            07-JUL-1999;

                                            The invention provides a new human cytokine receptor desinated Zcytor14. Zcytor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detacting the expression of a Zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zeytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14 to a subject. The present sequence represents a variant of the human cytokine receptor Zcytor14, designated Zcytor14. This treat is a transfer of form of the receptor Scytor14, designated Zcytor14. This

                                                                                                                                    밁
                                                                                                                                                                                                                                                                                               AA265250 to AA265350 represent 97 isolated human secreted protein genes. CC AAY76124 to AAY76223 are the secreted proteins encoded by the 97 human CC genes. The gene encoding this protein was found to be on chromosome 3. CC The genes and their corresponding secreted polypeptides are consistent or gene therapy. Also pathological conditions. CC e.g. by protein or gene therapy. Also pathological conditions can be CC diagnosed by determining the amount of the new polypeptides in a sample CC core by determining the presence of mutations in the new genes. Specific CC uses are described for each of the 97 genes, based on which tissues they CC diagnosis or treatment of cancer, tumours, developing products for the CC diagnosis or treatment of cancer, tumours, developmental abnormalities and foetal deficiencies, blood disorders, diseases of the immune system. CC disorders, schizophrenia, arthritis, asthma, psoriasis, sepsis, skin CC disorders, digestive/endocrine disorders, infections and AIDS. The collypeptides are also useful for identifying their binding partners.

The sequences shown in AAY76224 to AAY76424 represent fragments of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Q
This invention relates to nucleic acid sequences AAF93744 - AAF93916 which encode human secretory or membrane proteins represented by AAB88419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate CDNA sequences of the invention. The invention also includes methods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid
diabetes mellitus; arrhythmia; wound healing; ischaemic lesion; AIDS; Acquired Immune Deficiency Syndrome; virucide; hepatotropic; vasotrop autoimmune disorder; inflammation; cardiovascular disorder; hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays
                                                                                                       Human; immune system-related protein; allergy; rheumatoid arthritis;
                                                                                                                                                      Human gene 12 encoded immune system-related protein HADEX14.
                                                                                                                                                                                                         18-DEC-2001 (first entry)
                                                                                                                                                                                                                                                              AAE10920

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to human immune system-related protein and their DNA. Human immune-system related protein and DNA are useful for preventing, treating on ameliorating a medical condition in a mammalian subject, for diagnosing, preventing or treating immune system-associated disorders, autoimmune disorders (rheumatoid arthritis), inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated immune system-related polypeptide useful for treating rheumatoid arthritis, AIDS, allergy, cancer, Gaucher's disease, diabetes mellitus, arrhythmia, wound healing, ischemic lesions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-MAR-2000;

The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences AAY75942-Y76133 represent polypeptides encoded by cDNA sequences derived from several mouse, rat or human skin cell types. Sequences AAY75942-Y75947, AAY76020-Y76021, AAY76094-Y76104 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Skin; dermal papilla; keratinocyte; neonatal foreskin fibroblast; embryonic skin cell; keratinocyte stem cell; transit amplifying cell secreted; transmembrane; inflammation; cancer; neurological disease; angiogenesis; tumour vascularisation; growth disorder; developmental disorder; skin wound; hair follicle disorder;
                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                     AAY76119 are proteins with an N-terminal signal sequence, indicatin that they are secreted. Sequences AAY75986-Y75989, AAY76061-Y76071, AAY76106-Y76109 and AAY76121-Y76122 are proteins with one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dermai papilla, human

                                The present sequence is a polypeptide which is expressed in mammalian skin cells. The polypeptide is useful for stimulating keratinocyte growth and motility, inhibiting the growth of cancer cells, modulating angiogenesis, inhibiting angiogenesis and vascularisation of tumours, modulating skin inflammation, stimulating the growth of epithelial cells, inhibiting the binding of human immunodeficiency virus (HIV)-1 to leukocytes, and treating inflammatory disease, cancer and neurological diseases. The polynucleotide can be used as a marker, in the identification of genetic disorders, and for the design of
                                                                                                                                                                                       New isolated polynucleotide used in the ident disorders and encoding polypeptides used for disease, cancer and neurological diseases.
